New Preview Video Released for
Sci-fi Point-And-Click Adventure Prominence
Narrated tour highlights design features, first-ever reveal of character designs, free downloadable extras, and more

Long Island, New York – November 12, 2013 – Digital Media Workshop today released a video preview of their upcoming point-and-click sci-fi adventure, Prominence, to celebrate its newly launched Steam Greenlight page.

The 7-minute narrated preview video is packed with new in-game footage and for the very first time reveals art for several of the game characters. It also offers a glimpse into the development process, discussing how key design and feature decisions for Prominence were inspired by some of the most beloved point-and-click adventure classics, and demonstrates new features that are less conventional to the genre.

"In making this video, we wanted to show more of what Prominence has to offer, taking care to steer away from spoilers as much as possible since it's a traditional adventure game," said Kevin McGrath, lead programmer on the project. "We decided to go with a guided tour that demonstrates some of the game's key features, such as the control scheme and UI, and the puzzle types that players can expect to encounter in Prominence."

The video also gives players a sneak peek at some of the digital extras that will come with every copy of the game for free, a recap of which can be found on the newly launched Steam Greenlight page: http://steamcommunity.com/sharedfiles/filedetails/?id=194325369

Digital Media Workshop hopes to release Prominence in 2014 for Windows PCs (XP/Vista/7/8). The game will be available in English and several localized versions (including French, Italian, German, and Spanish subtitles).
